NEW QUESTION 4

- (Exam Topic 1)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).

You configure a pilot for co-management.

You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1.

You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager. Solution: Define a Configuration Manager device collection as the pilot collection. Add Device1 to the collection.

Does this meet the goal?

- A. Yes
- B. NO

Answer: A

Explanation:

Device1 has the Configuration Manager client installed so you can manage Device1 by using Configuration

Manager. To manage Device1 by using Microsoft Intune, the device has to be enrolled in Microsoft Intune. In the Co-management Pilot configuration, you

configure a Configuration Manager Device Collection that determines which devices are auto-enrolled in Microsoft Intune. You need to add Device1 to the Device Collection so that it auto-enrolls in Microsoft Intune. You will then be able to manage Device1 using Microsoft Intune. - (Exam Topic 1)

On which server should you use the Defender for identity sensor?

- A. Server1
- B. Server2
- C. Server3
- D. Server4
- E. Servers5

Answer: A

Explanation:

However, if the case study had required that the DCs can't have any s/w installed, then the answer would have been a standalone sensor on Server2. In this scenario, the given answer is correct. BTW, ATP now known as Defender for Identity.

NEW QUESTION 8

- (Exam Topic 2)

You need to meet the technical requirement for the EU PII data. What should you create?

- B. a retention policy from the Exchange admin center
- C. a data loss prevention (DLP) policy from the Exchange admin center
- D. a data loss prevention (DLP) policy from the Security & Compliance admin center

Answer: A

Explanation:

NEW QUESTION 10

- (Exam Topic 2)

Which report should the New York office auditors view?

- A. DLP policy matches
- B. DLP false positives and overrides
- C. DLP incidents
- D. Top Senders and Recipients

Answer: C

Explanation:

References:

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies>

This report also shows policy matches over time, like the policy matches report. However, the policy matches report shows matches at a rule level; for example, if an email matched three different rules, the policy matches report shows three different line items. By contrast, the incidents report shows matches at an item level; for example, if an email matched three different rules, the incidents report shows a single line item for that piece of content. Because the report counts are aggregated differently, the policy matches report is better for identifying matches with specific rules and fine tuning DLP policies. The incidents report is better for identifying specific pieces of content that are problematic for your DLP policies.

You have a Microsoft 365 subscription.

In the Exchange admin center, you have a data loss prevention (DLP) policy named Policy1 that has the following configurations:

- > Display the following policy tip text: Message blocked.

From the Security & Compliance admin center, you create a DLP policy named Policy2 that has the following configurations:

- > Use the following location: Exchange email.

- B. Not Mastered

Answer: A

Explanation:

Box 1: The email will be blocked, and the user will receive the policy tip: Message blocked.

If you've created DLP policies in the Exchange admin center, those policies will continue to work side by side with any policies for email that you create in the Security & Compliance Center. But note that rules created in the Exchange admin center take precedence. All Exchange mail flow rules are processed first, and then the DLP rules from the Security & Compliance Center are processed.

Box 2: The email will be allowed, and the user will receive the policy tip: Message contains sensitive data. Reference:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: ATP Safe Attachments

ATP Safe Attachments provides zero-day protection to safeguard your messaging system, by checking email attachments for malicious content. It routes all messages and attachments that do not have a virus/malware signature to a special environment, and then uses machine learning and analysis techniques to detect malicious intent. If no suspicious activity is found, the message is forwarded to the mailbox.

Box 2: ATP anti-phishing

ATP anti-phishing protection detects attempts to impersonate your users and custom domains. It applies machine learning models and advanced impersonation-detection algorithms to avert phishing attacks.

ATP Safe Links provides time-of-click verification of URLs, for example, in emails messages and Office files. Protection is ongoing and applies across your messaging and Office environment. Links are scanned for each click: safe links remain accessible and malicious links are dynamically blocked.
